SUCCESS IN BUSINESS is associated with firms that strategically use and develop sophisticated operations and information technologies. The High Technology Management (HTM) option is dedicated to the advancement of organizations through the use of state-of-the-art technologies, strategies, systems, tools and techniques. Students graduating with an Option in HTM are expected to have strong skills in a subset of information technology and operations management. Typical abilities of an HTM graduate should include proficiency areas such as systems analysis and design, database management, multi-media, information technology, e-commerce, telecommunications management, management science modeling, quality management, supply-chain management, and inventory management and control. Knowledge gained in HTM coursework can be applied to industries such as biotechnology, computer hardware, software and peripherals, telecommunications, manufacturing, defense and aerospace. However, nearly every organization, no matter how traditional or simple the product or service, can benefit from strategic, prudent use of technology.
