

Groups and Groupings – 3.2 - Toggle Activities to and from “Group Mode” on your Course Home Page

Why Do This

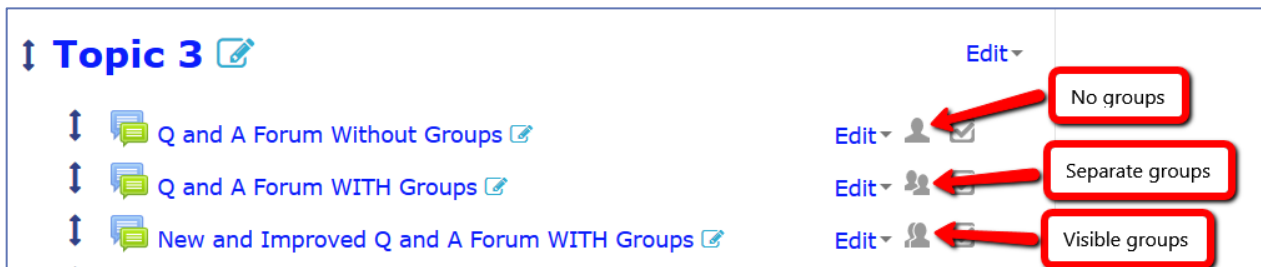

This guide describes a shortcut for changing the setting of activities in your course to **no groups**, **separate groups**, and **visible groups** on your course homepage, bypassing the need to click into **edit settings** for each activity. For more information on why you would want to use groups in Cougar Courses, and the definitions of no groups, separate groups, and visible groups, please refer to the guide titled **Creating Groups and Groupings**.

1. In your course, click **Turn editing on**.

2. Notice the profile icons to the right of each activity, indicating whether the activity is currently set to **no groups**, **separate groups**, or **visible groups**.

TIP: Mouse over the icon to read whether the icon represents no groups, separate groups, or visible groups.

3. Click on the profile icons to change the activity(s) from one mode to another. The icons will cycle through the three choices (no groups, separate groups, visible groups) with each click. For example, to change from no groups to visible groups, click on the icon twice.
