

TEMPS & TIPS

Did you know the CSU has policy on HVAC use and energy efficiency? And a goal to be NET ZERO by 2040

It's True!

In 2006, then Chancellor, Charles Reed signed executive order 987 which requires the CSU to meet or exceed CA's energy targets

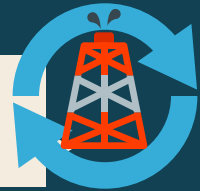

Those targets include how we should run our HVAC and manage occupant comfort

So, while we try to keep you comfortable we also try to adhere to the mandates set for us.

Numbers Don't Lie

There's a lot to energy consumption and HVAC operation is only a part but...

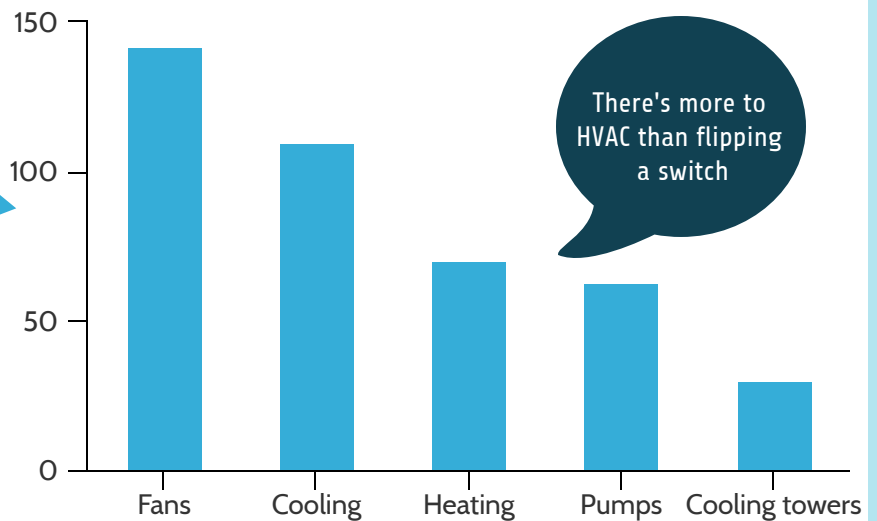

Its a BIG part!

40% On average, about 40% of a building's energy use comes from HVAC

How can you help?

- Remove portable fans
- Remove portable heaters
- Dress warmly on cold days
- Wear light clothing on hot days
- Be neighborly, your "too cold" might be their "too hot"

If you'd like to learn more ways you can help us meet our goals, email us! Energy@csusm.edu
