Nearly 80% of people who regularly use a computer or tablet have symptoms of eye trouble. And, with the number of hours being spent on mobile devices, those numbers are expected to increase.

The most common office-related complaint, Computer Vision Syndrome (CVS), is a condition that develops from spending hours on computers and digital devices. Many people aren’t aware they’re experiencing CVS, which may include one or more symptoms:

- Neck and shoulder pain
- Headaches
- Fatigue
- Irritated eyes
- Blurred or double vision
- Loss of focus

**Combat CVS with the right eye care and eyewear.**

With VSP Computer VisionCare, you have access to:

- a comprehensive eye exam that can detect eye health issues, such as CVS;
- eyewear specifically designed for using a computer or digital devices to help reduce eyestrain and fatigue.
