

CC Basics – 3.2 - Enabling spell check on various internet browsers

Apple Safari Browser

- 1. Simply open a Safari session, and right-clickin any area you can type.
 - Then, go to the spelling and grammar section.
- 2. Make sure "Check Spelling While Typing" is checked, and if you like also make sure "Correct Spelling Automatically" is checked.

Google Chrome

- By default, spell check is on in Google Chrome.
 If isn't working, follow these steps. First, hit the Chrome Menu button.
- 2. Click the settings button
- 3. Scroll down to the Languages section, and click "Language and input settings..."
- 4. On this window, make sure the checkbox in the lower-left hand corner is checked. This will enable spell check.

Microsoft Internet Explorer 9

- By default, IE9 does not have a spell check. If you would like one installed, you'll need an add-on called Speckie. Download from http://www.speckie.com/dload.
- 2. When prompted, make sure to click "save". Then, once its downloaded, you'll see this window:
- 3. Click "Run" to start the installation process.
- 4. The IE window will need to be closed, you'll be prompted to do this:
- 5. Click Next to go through the set-up wizard. You'll need to click "I accept the terms in the License Agreement", then hit **Next** again.
- Click Install.
- 7. Click Finish
- 8. Once you have finished installing the program, open Internet Explorer. On the bottom of the browser, a window will appear asking you to enable the new add-on. Click Enable to start spell check.

Mozilla Firefox

- Mozilla Firefox has a built-in spell checker already. If it isn't working, click Tools at the top of Firefox, then hit Options.
- 2. Next, clicked the" Advanced" button at the end of the Options window.
- 3. Check the box that says "Check my spelling as I type", and hit OK.

Check my spelling as I type
