Bloom’s Taxonomy

- Levels of Intellectual Learning

Susan Wilson, IDS, CSUSM
11/5/2014
Traditional Lecture Format

Bloom’s Taxonomy
Levels of Intellectual Learning
Flipped Course Elements

- First exposure at home
- Personalized pace
- Explained in multiple ways

Videos of lecture content
Flipped Course Elements

- Points for: quizzes, worksheets, short writing assignments, blogging, forums, etc.
- First exposure at home
- Personalized pace
- Explained in multiple ways

Videos of lecture content

Incentivize preparation for class

Susan Wilson, IDS, CSUSM 11/5/2014
Flipped Course Elements

- Points for: quizzes, worksheets, worked examples, short writings, blogging, forums, etc.
- Instructor identifies misunderstandings
- Students self assess
- Videos of lecture content
- First exposure at home
- Personalized pace
- explained in multiple ways
- Assess understanding
- Incentivize preparation for class
- Points for: quizzes, worksheets, worked examples, short writings, blogging, forums, etc.
Flipped Course Elements

- Just-in-time teaching
- Challenging problems or examples - clickers
- Authentic research
- Experiments
- Discussion
- Debate
- Case-studies
- Group projects

- First exposure at home
- Personalized pace
- Explained in multiple ways

Class – focus on higher level cognitive activities

Videos of lecture content

Assess understanding

Incentivize preparation for class

- Points associated with: quizzes, worksheets, worked examples, notes, short writings, forums,

- Instructor identifies misconceptions & misunderstandings
- Students self assess

Susan Wilson, IDS, CSUSM

11/5/2014
Considerations & Concerns

- Your learners
- Course content and place in the curriculum
- Why am I lecturing?
- Breadth vs. depth of content coverage
- What about readings?
- How much – start small or go all in?
Considerations & Concerns

- Change in teaching style
- Requires careful preparation
- Preparing students to be active participants

- Student pushback
  “If I’m paying for a class and a professor to teach me, then I do not want to teach myself for homework and have homework for class.”
Student Perceptions

- Survey of flipped class studies (11) Bishop and Verleger, 2013
  “Despite differences among studies, general reports of student perceptions were relatively consistent. Opinions tended to be positive, but there were invariably a few students who strongly disliked the change.”

- Clarisa Bercovitch Guelman’s flipped class
  - “Very hands on. Awesome! Videos are a lot of help because I can watch them multiple times.”
  - “The “Reverse” layout kept important learning time in the class with examples instead of covering material. The questions and activities solidified concepts for me.”
  - “I also liked the group learning structure that this class used. I learned much more from my fellow students because of this.”
Who is Doing it?

- CSU Chico - Accounting, Political Science
- CSU Northridge – Multimedia Design
- CSU Los Angeles – Management
- CSU Long Beach - Anatomy
- Cal Poly Pomona- Physics
- SDSU – Pre-calculus
- SJSU – Engineering Electronics and Circuits
- Colorado State University at Pueblo – World History
- UC Irvine – Biology
- U. of Colorado at Boulder – Ecology and Evolutionary Bio
- Miami U. – Microeconomics and Software Engineering
Getting Started

Technology, Process and Examples
Before the Classroom

- **Lecture Content Videos:**
  - **Tools:**
    - TechSmith Relay, Camtasia Studio, SoftChalk, YouTube, Screencast.com, Jing
    - Tablets, iPad with apps like Doceri
  - **Open Educational Resources (OER)**
  - Publishers online products
  - Incentivize preparation & assess understanding
    - Cougar Courses activities:
      - quizzes, forums, assignments, database, glossary
    - Publishers online exercises
INSIDE the Classroom

Active Learning Techniques & Activities

- Peer Instruction
- Team Based Learning
- Structured Debates
- Problem based learning
- Case study/mini-case study
- Simulations, Experiments, Labs
- Jigsaw Group Projects

Student Engagement Techniques: A Handbook for College Faculty, by Elizabeth Barkley

Learner Centered Teaching; Putting the Research on Learning into Practice, by Doyle, Terry, Zakrajsek Todd
Case 1: Peer Instruction – Physics, before class

**Information**
- View 2-3 mini-lectures—1 objective each related to Newton’s 3rd law of motion
  (1. Force, 2. Contact vs. Long Range, 3. Gravity)
- Include worked examples and explanation eg. net force

**Understand**
- **Students:** Take readiness quiz—multiple attempts, adaptive.
  - Submit a few problems, based on the some worked examples with fading
- **Instructor:** Reviews before class

**Review and Clarification**
- **Students:** Q & A forum
  - Explain the concepts in their own words (What is Newton’s 3rd law of motion?)
  - Pose a question
    - Clarification
    - Request more Information
- **Instructor:** Review/collects questions

Susan Wilson, IDS, CSUSM
11/5/2014
Case 1: Peer Instruction – a Playlist

View playlist
Case 2: Structured Controversy in Accounting

- Topics are aligned with core text. (Corporate social responsibility, Sustainability of Euro, International Taxation, etc.)
- Teams of 4, further broken into pairs.
- Topics assigned/selected
- Team identifies the controversial issue(s) within topic.
- Each pair takes one side and develops position.
- Present to whole class
- Team merges opposing perspectives into cohesive, reasoned position
Case 2: Structured Controversy - Before Class

Information

All students
- Use *group self-selection*
- Read text

Specified team
- Read/view/listen to numerous posted resources

Understand

Teams
- Using *chat, forum, or BBB* identify areas of controversy
- Agree on debate topic.
- Submit via *online text assignment* for approval

Apply/Analyze

Pairs
- Develop argument using a *Wiki*

All students
- Complete pre-debate opinion survey using *feedback*
Case 2: Structured Controversy - Before Class

Pre-Debate Opinion survey

*1 Sustainability of the Euro 1
Should Greece leave the Euro currency system?
○ Yes ○ No

*2 Sustainability of the Euro 2
If Greece is required (or chooses) to exit the Euro currency system, do you believe it should leave immediately (as opposed to a phased departure over time)?
○ Yes ○ No

*3 International Taxation 1
Do you believe that tax competition, as it stands, is fair?
○ Yes ○ No

*4 International Taxation 2
Do you believe that tax competition can be effectively regulated?
○ Yes ○ No

*5 Sustainable Capitalism 1
Does the government have the tools and resources for a transition to a new sustainable model of capitalism?
Case 2: Structured Controversy - In Class

Controversial Issues Report Survey

*1  Rate the effectiveness of five minute presentations to clearly explain the positions taken by groups in debate on a scale of 0-100.

*2  Rate the effectiveness of rebuttal/critique responses to address concerns or issues identified on a scale of 0-100.

*3  Rate the relevance of questions asked by groups in the debate on a scale of 0-100.

*4  Rate the level of knowledge of controversial issue covered by the team in the debate on a scale of 0-100.

*5  Rate the enthusiasm for discussion of controversial issue by debate participants on a scale of 0-100.
Case 2: Structured Controversy -After Class

Repeat the feedback survey, students can view results

<table>

**Case 3: Lab Course, Before Class**

**Information & Exploration**
- Read chapters
- View website from National Heart Lung Blood Institute
- View online animations
- Listen to abnormal heart sounds
- Watch video on YouTube about how heart works

**Understand**

**Students:**
- Take readiness quiz
- Multiple attempts, score only.
- Delay between attempts
- Random from testbank
  
  **Instructor**
  - Reviews to identify most common incorrect answers

**Review and Clarification**

**Students:**
- After a passing quiz score, the students can view a demonstration of the lab
- Q & A forum
  - Explain the concepts in their own words
  - Pose a question
    - Clarification
    - More Information
  
**Instructor**
- Reviews and collects questions

---

Susan Wilson, IDS, CSUSM

11/5/2014
Case 3: Lab Course, In Class

**Review and Clarification**

**Students:**
- Ask any additional questions

**Instructor:**
- Short review of material/demo of the lab
- Reviews common misconceptions or errors from quiz results and forums
- Answers or poses forum questions to the class

**Apply**

**Individual/Teams**
- Use a wiki page template as a lab sheet

**Instructor**
- Leads whole class review.
Case 3: Lab Course, After Class

Apply

Group
• Contribute to a glossary of terms incorporating multimedia when possible

Analyze

Group
• Discuss on a forum questions for further exploration
• Individually they review the data from the lab sheet and write a summary paper.

Evaluate

Individuals
• Students write a reflection of their lab experience
• What would they do different?

Instructor:
• Grades both team solution and individual summary
Summary

- Videos are Information Transfer
  - Short, tightly focused
  - Use Cougar Courses to support and encourage viewing.
- Utilize open education resources

- Optimize use of classroom time – higher order thinking
  - Student-centered activities
  - Practice, active guidance and feedback
  - Individual support just-in-time
- Use Cougar Courses after class for reflection, demonstrated learning, sharing projects, etc.
Does it Work?

What does the Research Indicate?
Physics

- Students in PI courses showed learning gains ranging from 0.49 to 0.74 over eight years of assessment at Harvard University.
- Two physics classes taught by traditional methods during the assessment period show much lower learning gains (0.25 in a calculus-based course in 1990 and 0.40 in an algebra-based course in 1999).

- 2 sections of large enrollment physics, both taught via “interactive lecture”
- Week 12, flipped 1 section,
- Engagement increased from 45 +/- 5% to 85 +/- 5MC test
- Ave quiz score 74 in flipped vs. 41 in control.
Computer Information Systems

- Davies & Ball (BYU) – Compared 3 approaches to teaching a spreadsheet class
  - Large lecture
  - Independent study with My IT Lab videos and sims
  - videos/simulations and optional flipped class

Active Learning

- Leads to better student attitudes, and improvements in thinking and writing. (Bonwell and Eison, 1991)
- Collaborative learning improves learning outcomes relative to individual work.

<table>
