## Appendix F

## California State University, San Marcos

## Quantitative Methods

The Phase 2 survey was distributed to all students ( $n=13,144$ ) via email at California State University, San Marcos (CSUSM) between 10/31-11/21/2016 and 7.8\% of students participated ( $n=1,023$ ). Students received an initial email invitation to complete the survey along with two weekly email reminders. Students were able to enter their names in a raffle to win one of two $\$ 40$ Target gift cards. A campus point person, identified by a campus administrator, worked with the research team to recruit students and administer the survey electronically via campus email address. The marketing team through the CSU Office of the Chancellor created marketing materials (e.g., press release, flyer, social media template posts) for the campus point person to disseminate in order to encourage student participation.

## Comparison of Demographics of Survey Participants to Overall Campus Student Population

Overall, CSUSM sample characteristics slightly varied from the demographics of the CSUSM student body. Student responses disaggregated by racial and ethnic groups were similar in the sample and CSUSM population, with the exception percentages of White participants who were $45.7 \%$ of the sample and $29.3 \%$ in the student population. Asian/Pacific Islander participants were $16.0 \%$ of the sample and $10.1 \%$ of the student population. Full time students were represented higher in the sample ( $89.2 \%$ ) than the student body ( $83.1 \%$ ). Part time students were represented lower in the sample ( $10.7 \%$ ), but higher in the student population ( $16.9 \%$ ). There were a higher representation of non-first generation college students (59.5\%) than first generation students ( $40.5 \%$ ) in the sample. The largest difference was regarding gender, where women students were $79.1 \%$ of the sample, but $61 \%$ student body. Women often have much higher response rates then men on surveys (Sax, Gilmartin, \& Bryant, 2003; Underwood, Kim, \& Matier, 2000). The mean age was slightly higher in the sample ( $x=23.3$ years) when compared with the student body ( $x=22.0$ years).

| Median | 21 | - |

## Overall Campus Food Security and Homelessness

Overall, $42.2 \%$ of CSUSM students reported food insecurity, of those $19.8 \%$ experienced low food security and $22.4 \%$ very low food security, conversely $38.2 \%$ reported high food security and $19.6 \%$ reported marginal food security. Overall, $13.4 \%$ of CSUSM students reported being homeless one or more times in the last 12 months based on the combined HUD and DOE definitions.

## Academic Achievement

As a general trend, students who experienced food insecurity in the last 30 days and/or homelessness in the last 12 months had lower GPAs and higher academic concerns than students who reported being food secure and/or housing stable [See Tables 2-5]. GPA was based on selfreport. Academic Concerns is a variable created from the Presenting Problems Scale using a continuous variable from 1-5 based on current level of stress, where the score goes up with greater concern. Items relate to concerns about grades, motivation, time and stress management, and concentration among others.

| Table 2 |  |
| :--- | :---: |
| Mean GPA by Food Security | $\underline{\text { GPA }}$ |
| High Food Security | 3.38 |
| Marginal Food Security | 3.23 |
| Low Food Security | 3.24 |
| Very Low Food Security | 3.17 |
|  |  |

| Low Food Security | 3.25 |
| Very Low Food Security | $\underline{\underline{\text { Mcademic }}}$ |
|  | $\underline{\text { Concerns }}$ |
| Table 5 | 2.75 |
| Mean Academic Concerns Homelessness | 3.16 |
| Not Homeless within Last 12 Months |  |

## Physical Health \& Activity

There were also heavy tolls on students' physical health and daily activity as well. Students who experienced food insecurity in the last 30 days and/or homelessness in the last 12 months as a pattern scored more adversely on physical health indicators. In the past 30 days, students experienced far more days with inactivity and physical health issues, such as physical illness and injury, than their secure peers [See Tables 6-9].
Table 6
Poor Health Days by Food Security

|  | Mean Poor <br> Health Days |
| :--- | :---: |
| High Food Security | 2.49 |
| Marginal Food Security | 2.87 |
| Low Food Security | 2.97 |
| Very Low Food Security | 5.83 |

|  |  |
|  | Mean Inactive |
|  | Days |
| High Food Security | 2.82 |
| Marginal Food Security | 4.11 |
| Low Food Security | 4.34 |
| Very Low Food Security | 7.06 |
| Table 9 |  |
| Mean Inactive Days by Homelessness |  |
|  | Mean Inactive |
|  | Days |
| Not Homeless within Last 12 Months | 3.93 |
| Homeless within Last 12 Months | 6.93 |

## Mental Health

Students' access to basic needs appeared to relate to their mental health and this was demonstrated in reports of higher levels of personal concerns and more poor mental health days in the last 30 days with food insecurity or homelessness [See Tables 10-13]. Personal concerns is a variable created from the Presenting Problems Scale using a continuous variable from 1-5 based on current level of stress, where the score goes up with greater concern. Items relate to concerns about anxiety, fear, physical health problems (i.e., headaches, stomach pains, etc.), sleeping problems, fatigue, and suicidal feelings, among others.

| Table 10 |  |
| :--- | :---: |
| Mean Personal Concerns by Food Security | Mean Personal Concerns |
| High Food Security | 1.86 |
| Marginal Food Security | 2.03 |
| Low Food Security | 2.2 |
| Very Low Food Security | 2.5 |
|  |  |
| Table 11 Mean Personal Concerns |  |

| Table 12 |  |
| Mean Poor Mental Health Days by Food Security |  |
|  | Mean Poor Mental |
| High Food Security |  |
| Marginal Food Security | 6.05 |
| Low Food Security |  |
| Very Low Food Security | 8.3 |

## Patterns of campus-based resource use

There was a gap in the number of students qualified for CalFresh based on federal income criteria combined with California student exemptions (21\%) and those who used it at the time of the survey ( $3.1 \%$ ). However, many students who took the survey had heard about CalFresh, but never used it (49\%) [See Table 14]. Campus food pantries are another important emergency food resource for students. When combining the number of students who had used the campus food pantry at the time of data collection with those who had in the past, $4.3 \%$ students had utilized this service [See Table 15]. Increasing marketing and engagement around accessibility and use of CalFresh and the food pantry are recommended.

Table 14
Overall CalFresh Eligibility vs Use

|  |  | $\underline{\mathrm{n}}$ | $\frac{\%}{21}$ |
| :--- | ---: | :---: | :---: |
| CalFresh Eligible |  | 215 | 21 |
| Not CalFresh Eligible |  |  | 79 |
| CalFresh Patterns of Use | Never heard of it | 416 | 41.7 |
|  | Heard of it but never used it | 489 | 49 |
|  | Used it in the past | 62 | 6.2 |
|  | Currently use it | 31 | 3.1 |

Note. In 'CalFresh Patterns of Use" students may have selected more than one item.

Table 15
Overall Percentages of Participants Using On-Campus Food Pantry

|  | $\underline{\mathrm{n}}$ | $\underline{\%}$ |
| :--- | :---: | :---: |
| Never heard of it/Not offered at my campus | 810 | 80.8 |
|  |  |  |
| Heard of it but never used it | 150 | 15 |
| Used it in the past | 34 | 3.4 |
| Currently use it | 9 | 0.9 |

Note. Students may have selected more than one item.
