

# ALUMINUM FOIL BOATS

- 1) Use ONE square piece of aluminum foil to create a boat that can hold as many pennies as possible. You can create any style boat you choose.
- 2) Place the boat in the water and add pennies to your boat until it sinks. Count the pennies as you go along.
- 3) Once your boat sinks, stop adding pennies. Count how many pennies you fit on your boat and compare this number to the other competitors.
- 4) Redesign your boat or build another one and redo the activity.
